RECOMMENDATIONS 22

LETTER FROM THE PRESIDENT

Dear HC Community,

The beauty of Hastings College is not just in the breadth of green spaces or the architecture of historic buildings; it's in the enduring spirit of a campus that has been intentionally transforming itself for over 140 years. Facilities and programs evolve, but our focus on academic and performance excellence never wavers.

While the landscape of Hastings College has changed significantly since McCormick Hall was built, our purpose remains. As our Chaplain Doodle Harris says, "at HC we are committed to shaping the best human beings possible. That means not only an education for our minds, but finding a place for our hearts to feel at home."

The 1882, our newest building, a four-story residential hall, is more than just bricks and mortar. It is a commitment to our educational model—a curated learning environment that values togetherness and shared experiences.

Our Campus Master Plan is not a static document, but rather a guide—a framework of imagining right spaces for right purposes. The Plan inspires confidence and deepens the sense of connection that defines Hastings College.

As my late father, Professor Darrel Lloyd, often commented, we are a college that is "on the Plains but of the world." This Plan is our commitment to Broncos everywhere that we have planned, cared for, and stewarded our beloved HC well into the future.

Sincerely,

Rich Lloyd, President

Hastings College

OVERVIEW

OVERVIEW

SCOPE

Hastings College has embarked on a master facilities plan that will align its facilities and physical campus with its educational, strategic, operational, student life, and athletic aspirations. The College hired Clark & Enersen and Tetrad Campus Insights as expert consultants to complete this work. Over the course of five months, the consultant team engaged with Hastings College leadership, faculty, staff, students, and other stakeholders to gather information, analyze opportunities, and create new ideas to enhance educational delivery, accommodate future growth, address deferred maintenance needs, optimize space utilization, and prioritize capital expenditures for the next 10 years.

GOALS & OBJECTIVES

The primary goals of the master plan, as identified by the Master Plan Steering Committee, are to enhance:

- **Community** – Provide interior and exterior space that engages with the college, city, and local community to create a sense of belonging, thereby bringing to life the "One Campus. One Community" slogan.
- **Experience** – Provide best-in-class learning, living, workplace, and technology to support pedagogical goals and the wellbeing of students, employees, and visitors.
- **Value** – Provide the programs, offerings, and amenities that align with the local region to compete on strong value propositions, using size as an asset.
- **Outcomes** – Provide an implementable roadmap that has cross-campus alignment in support of improved retention, success, satisfaction, finances, brand awareness, and long-term viability.

In order to achieve the goals of the master plan, five primary drivers were identified for the master plan. The drivers were the backdrop for the space and building planning concepts, and include:

Relational Connectedness Creating active, engaged, and connected citizens.**Visible Vibrant Community**Enhancing thought leadership, critical thinking, and creative energy.**Experience Marketing**Showcasing the experiences enabled by quality space, building, environs, and technology for improved marketing and recruitment. **Alignment & Defragmentation**Purposeful and productive location of academics, activities, and support.**HolisticGraduate**O□ering programs, activities, and support for well-rounded graduates and a high return on investment.

STAKEHOLDERS

Throughout the course of the master planning process, great effort was made to ensure a comprehensive and inclusive level of engagement across a wide range of stakeholders and decision-makers. This was accomplished through numerous on-site meetings and walk-throughs, virtual meetings, presentations, questionnaires, and surveys.

Below is the list of individuals who contributed to this extensive effort. With gratitude, we acknowledge their time and commitment.

Hastings College Executive Council

ASSUMPTIONS & LIMITATIONS

The purpose of this master plan is to inform high-level decisions for the types, timing, phasing, and costs of site and facilities projects for Hastings College through 2036. It should be viewed as a high-level roadmap, driving the general configuration of campus and the size and location of future building projects. While the plan should not be considered comprehensive programming or design, it presents data-driven concepts and phasing that can be used to serve the projected needs of the campus for the next 10 years.

The costs presented in this document are preliminary and are based on 2026 dollars. Depending on actual timing and sequencing of future projects, cost escalation and other factors will impact the magnitude of costs.

Off-campus properties, such as Sachtleben Observatory and Bryan College of Nursing space, are excluded from the master plan.

DATASETS

Multiple sources of data were used for this study. A listing of each dataset is provided below, along with a description of how the data was parsed and/or utilized.

•

Academic Degree Structure – Spreadsheet used to align current and future CIP (Classification of Instructional Programs) codes. Used to organize academic departments and divisions, and the students, faculty, and courses within.

•

Registrar Data – Spreadsheet listing all course data from 2015-2025. Used Fall 2025 data as the baseline for current course enrollment, classroom utilization, and academic department.

•

Enrollment Data – Spreadsheet listing student enrollment from 2015-2025, de-duplicated to count primary majors only. Used Fall 2025 data as the baseline for student headcount by department and division. Full-time students were counted as 1.0 FTE, while part-time students were counted as 0.5 FTE.

•

Human Resources Data – Spreadsheet listing anonymized employee information for Fall 2025. Used for assigning employees FTEs to departments/divisions for baseline input for program analysis and space needs analysis.

•

Tuition Data – Spreadsheet listing tuition, fees, student-faculty ratios from 2015-2025. Used Fall 2025 data as a baseline input for program analysis.

•

Deferred Maintenance Data – Spreadsheet managed by National Facilities Management, listing current and projected deferred maintenance needs. Some data was hidden, but remaining information was used as a baseline for operational considerations.

•

Space Use Data – Existing space use data did not exist prior to the master plan. The consultant developed a campus-wide space use spreadsheet to catalog each room on campus, its approximate size, and its known uses. Used as the baseline for analyzing current space use and space metrics.

•

Hanover Research Data – Local, regional, and national data for academic programs, provided through partnership with Tetrad Campus Insights. Used for high-level assessment of current and future academic program metrics such degree completions, labor market statistics, and competitive analysis.

PREVIOUS REPORTS

Hastings College has invested in prior studies, assessments, and designs, all of which were shared to provide background information and context for the master planning process. These documents include:

- **Hastings College Existing Student Housing Assessment, Dec. 2023 (HBA, Morrissey Engineering, Turner)** – Assessment of the physical condition and infrastructure of Taylor Hall, Bronc Hall, Babcock Hall, and Bronco Village.
- **Hastings College Mechanical, HVAC, and Controls Assessment, Mar. 2025 (Optimized Systems)** – Assessment, deficiencies, and recommendations related to the mechanical, HVAC, and building control systems for the majority of campus buildings.
- **Hastings College Lighting Recommendation Report, Feb. 2024 (MR Global Productions)** – Exterior lighting recommendations for building and site lighting.
- **Hastings College McCormick & Fuhr Assessment, Jan. 2022 (BVH, Olsson)** – Assessment and recommendations for the building and building systems for McCormick Hall and Hayes M. Fuhr Hall of Music.
- **Mass Notification Risk Analysis and Recommendations Report, Aug. 2025 (Jensen Hughes)** – Risk analysis, evaluation, and recommendations for campus emergency communications.
- **Hastings College ADA Study, Jun. 2025 (CMBA)** – Assessment and recommendations for ADA (Americans with Disabilities Act) compliance on the majority of campus buildings.
- **Hazelrigg Student Union | Design Development Narratives, Feb. 2025 (Morrissey Engineering)** – Mechanical and electrical narratives for prior planned projects at HSU.
-

Perkins Library Renovation | Program Statement and Conceptual Design, Apr. 2023 (BVH) – Program and conceptual design information for prior planned project at Perkins Library.

PROCESS

PROCESS

ASSESS-ANALYZE-ACHIEVE

The process for this master facilities plan was centered on the foundations of in-depth fact finding, creative ideation, and data-driven decision-making. In order to structure the plan over the course of several months, a three-step process was utilized: ASSESS - ANALYZE - ACHIEVE.

- ***ASSESS:*** This step was focused on in-depth investigation of existing parameters unique to Hastings College, facilitated through open-ended discussion, on-site tours, and data aggregation.
- ***ANALYZE:*** This step was comprised of refining, analyzing, and visualizing the information acquired during the ASSESS stage, followed by ideation of possible solutions across a wide variety of academic, financial, operational, and facility categories.
- ***ACHIEVE:*** This step of the process focused on the development of specific recommendations, including garnering input and buy-in, and fine-tuning final recommendations for approval.

A description of the process steps across each category is shown on the adjacent table.

RECOMMENDATIONS

PROGRAMS & FINANCES

A critical component of the planning process was the analysis of academic programs and finances. The process, aimed at accurately assessing and projecting student growth rates and determining the number of faculty required to deliver the academic experience, was based on a compounded annual growth rate (CAGR) assessment. This evaluation utilized data from Hanover Research, summarized at national, regional, and state levels. Specifically, the regional data encompasses the Plains Region, including Nebraska, Iowa, Kansas, Minnesota, Montana, North Dakota, and South Dakota, while the state-level data focused on Nebraska, Arizona, and Colorado.

This foundational research data established a fundamental basis for projecting student and faculty growth over the next decade. The results of this thorough assessment process were instrumental in driving the space requirements necessary to deliver the academic programs effectively.

The projected number of FTE students for the purposes of this plan are:

PROGRAMS & FINANCES RECOMMENDATIONS

Program Recommendation #1: Class Size "Right-Sizing"

•

Establish efficient class sizes.

Program Recommendation #2: Faculty-to-Student "Right-Sizing"

•

Align the faculty count and distribution for the existing student headcount.

Program Recommendation #3: Review Ratio of Tenure Track vs. Non-Tenure Track Faculty

•

Review and adjust, where appropriate, the TT:NTT ratio.

Program Recommendation #4: Establish a General Education Program

•

The GenEd program serves as the academic foundation that supports student learning across disciplines and reinforces the institution's core learning objectives. By refining GenEd requirements, Hastings College can preserve that purpose while maximizing academic efficiency and ensuring students gain the skills and knowledge needed for success. Revise the current GenEd program to maximize academic efficiencies and ensure student are obtaining future proof skills and knowledge.

Program Recommendation #5: Increase Philanthropic Goals

•

Consider options to increase philanthropic goals to fund growth (3-5%).

22

HASTINGS COLLEGE | 2026 MASTER FACILITIES PLAN

23

BUILDINGS

BUILDING ASSESSMENT SUMMARY

A high-level assessment of the Hastings College building inventory was conducted to evaluate facility conditions across multiple parameters:

Architecture

•

Exterior

•

Entrances

- Interior Finishes
- Life Safety
- Codes & Accessibility
- Superstructure
- Conveying Systems

Engineering

- Fire Protection
- Plumbing
- Mechanical
- Power
- Lighting
- Telecomm.
- Fire Alarm

Functionality

•

Space Size

•

Technology

For each parameter, a scale of 1 to 5 was used to assess the current state. Ranking values are defined below:

•

1 = Very Poor Condition (in need of replacement)

•

2 = Poor Condition (nearing end of life)

•

3 = Adequate Condition (long-range upgrades should be considered)

•

4 = Good Condition (at/near contemporary standards)

•

5 = Excellent Condition (recently installed or replaced)

For each building, a variety of approaches were used to develop the ranking. Building tours were conducted in association with Hastings College staff, as well as National Facilities Management personnel. Additionally, some buildings had prior studies that were used to supplement the observations from the tours. It should be noted that the condition rankings are high-level and do not represent a detailed facility analysis.

BUILDING RECOMMENDATIONS

Building Recommendation #1: Building Floor Plans

•

Develop and routinely maintain electronic building floor plans.

Building Recommendation #2: Campus Design Guidelines

•

Develop campus design guidelines to ensure consistent quality of facilities.

Building Recommendation #3: On-Call Contracts

•

Select team of vetted on-call design and construction firms to quickly respond to current and future building needs.

SPACE

SPACE ANALYSIS METHODOLOGY

The space analysis for Hastings College was completed using a standardized, metric-driven approach consistent

with higher-education planning practice. A full campus space inventory was established as the analytic baseline,

documenting every room by building, floor, function, area, and seat count. Spaces were classified using highereducation

space classification methodology, allowing consistent comparison across academic, administrative,

residential, student life, athletics, and support categories.

A full campus walkthrough confirmed current room use, resolved discrepancies in existing records, and validated

quantitative attributes. Final data—including assignable square footage, seat count, utilization characteristics, and

functional relationships—was consolidated into an integrated dataset to support comparative and demand-based

analysis. Each space type was evaluated against planning benchmarks and performance metrics. Academic spaces

were analyzed for seat density, area-per-station, configuration, and alignment with instructional norms; specialized

labs, studios, and rehearsal rooms were compared to discipline-specific requirements. Office and administrative areas

were assessed for workspace ratios, organizational adjacencies, and right-sizing relative to staffing levels. Residential

and student life spaces were reviewed for capacity, condition, and contemporary program expectations. Nonassignable

and circulation areas were examined to identify inefficiencies and opportunities for recoverable space.

26

STUDENT ENROLLMENT

DEFINE CURRENT

AND HISTORIC

QUANTITIES OF USER

TYPES

FACULTY COUNT

ADMINISTRATIVE/STAFF

COUNT

STEP 1 in the projection process is to define the current

and historic quantity of relevant user types. The user types

analyzed should be individuals who will impact space

planning. This data may be used to determine a trend for

projected quantities of user types later in STEP 2 of the

process or may be used as a benchmark against which to

check targeted growth rates.

FACULTY 10 12 14 17

HISTORIC USER QUANTITY BY YEAR

2022

2023

2024

2025

1

Example:

SET GROWTH

TARGETS FOR USERS

FACULTY 17

USER QUANTITY

GROWTH

RATE

TARGET

30%

2026

2027

2028

2029

2030

STEP 2 in the projection process is to set growth targets for relevant user types. Targets may be percentage growth, numerical targets, or may simply continue to increase or decrease along the current trend line. Employee targets may be driven by financial models. This data will be used to identify the future quantity of users in STEP 3.

2

Example:

FACULTY 17 22 27 35 46

DETERMINE AND

WEIGHT PROJECTED

QUANTITIES OF

USERS

USER QUANTITY

GROWTH

RATE

TARGET

30%

2026

2027

2028

2029

2030

STEP 3 in the projection process is to determine and weight projected quantities of relevant user types. If a target growth rate is used, that rate will be applied annually, beginning with the current year quantity. If numerical quantity targets are used, the quantities will be already defined. Once these future user quantities are determined, a user factor may be applied to certain users to decrease or increase the impact they will have on space during STEP 5. Consider applying this for sporadic or parttime users.

Example:

CLASSROOMS STUDENTS

CORRELATE SPACE

TYPE GROWTH WITH

USER TYPE GROWTH

SPACE TYPE

CORRELATED

USER TYPE

Example:

STEP 4 in the projection process is to correlate space type growth with user type growth. Space types should be broadly categorized and be assigned a user type whose growth will most directly correlate with the growth of each space type. In some instances, more than one user type will affect the growth of the space type.

4

STEP 5 in the projection process is to assign unit space type quantities to user types. This will begin the translation of people growth into the quantification of future space needs. The unit quantity of space assigned to each user type(s) may be based on the ratio of the current net quantity of the space type to the current quantity of the user type(s) correlated in STEP 4. Alternatively, an industry standard or targeted quantity may be used.

CLASSROOMS STUDENTS 18 SF

18 SF

FUTURE

USER

QUANTITY

(2035)

FUTURE

SPACE

NEED

(2035)

Example:

STEP 6 in the projection process is to determine future space needs by combining the data created in STEPS 3 and 5. Projected quantities of user types in each year will be multiplied by their correlating unit space type quantities to determine a projected net space need for each future year.

6

SPACE TYPE 1

SPACE TYPE 2

SPACE TYPE 3

SPACE CATEGORIES AND DESCRIPTIONS

28

000 NON-ASSIGNABLE FACILITIES

Spaces not included in the categories above. This includes circulation, custodial closets, public restrooms, mechanical spaces, electrical spaces, telecommunications spaces, shafts, and similar spaces.

200 LABORATORY FACILITIES

Spaces with special-purpose equipment or configurations used for student experimentation, observation, or practice.

This includes both Class Laboratories (scheduled instruction) and Nonclass Laboratories (unscheduled).

300 OFFICE FACILITIES

Office facilities are individual, multiperson, or workstation spaces specifically assigned to academic, administrative, and service functions of a college or university.

500 SPECIAL USE FACILITIES

Spaces for activities with specific requirements, including military training, athletic facilities, media production, clinics (outside of health care facilities), animal shelters, and agricultural field activities.

700 SUPPORT FACILITIES

Centralized spaces that provide support services for an entire campus or large building/unit, such as central computer centers, maintenance shops, and central storage.

400 STUDY FACILITIES

Areas for individual or group study, such as libraries, study carrels, and general-purpose computer labs, not restricted to a specific discipline by equipment.

600 GENERAL USE FACILITIES

Spaces available to a broader population, such as auditoriums, dining halls, exhibition areas, lounges, merchandising, recreation, and meeting rooms.

800 HEALTH CARE FACILITIES

Spaces used for providing patient care (both human and animal) located in student infirmaries, clinics, and medical

schools.

900 RESIDENTIAL FACILITIES

Housing for students, faculty, staff, and campus visitors, including dormitories, apartments, and hotels.

100 CLASSROOM FACILITIES

Spaces used for formally scheduled instruction that do not require special equipment or a specific configuration tied to a single discipline.

SPACE RECOMMENDATIONS

Space Recommendation #1: Space Inventory

• Develop and routinely maintain a space inventory to track room allocation by use, department, and division.

Space Recommendation #2: Classroom Sizing

• Modify classroom furnishings, technology, and layout to enable active learning.

• Increase inventory of classrooms with capacities of 31-40 to satisfy projected teaching needs..

Space Recommendation #3: Classroom Utilization

• Align course scheduling and classroom assignments to achieve average classroom utilization of 70% across

campus.

OPERATIONS

OPERATIONS SUMMARY

The existing operations of Hastings College were discussed, observed, and analyzed at a high level to understand existing pain points, deferred maintenance challenges, and opportunities for improvement.

The consultant team received data from Hastings College's maintenance provider, National Facilities Management, which included deferred maintenance summaries for each building across several parameters.

Using that information, and supplementing it with their own analysis and projections, an evaluation was made to project 10-year operational costs for each building. This information provided a data point for master plan decisions related to demolition, renovation, and/or new construction.

OPERATIONS RECOMMENDATIONS

Operations Recommendation #1: Deferred Maintenance Budget

•

Increase deferred maintenance budget to systematically address deficiencies across campus.

Operations Recommendation #2: Building Metering

•

Install water and power metering in individual buildings to track current and future usage.

Operations Recommendation #3: Building Management Systems

•

Install common building management system (BMS) to enhance building operations, trending, troubleshooting, and energy use.

35

MASTER FACILITIES PLAN

A successful master plan is both visionary and implementable. It includes:

•

Phased development strategies

•

Capital improvement prioritization

•

Funding and financing alignment

•

Measurable implementation benchmarks

Phasing allows institutions to respond to changing enrollment, funding availability, and academic priorities while maintaining momentum.

The total inventory of space at Hastings College meets the projected 10-year needs of the campus, which is a luxury many institutions do not have. However, opportunities for reorganization and renovation of existing buildings and space were identified in order to meet broader goals of Hastings College. Through that lends, a series of short-term and longer-term projects has been developed. The primary objective was renovating and reorganizing existing campus assets. The driving factors were:

•

Optimizing Efficiency: Aggregation of campus functions.

•

Improving Academic Space: Improvement of classrooms to match pedagogical objectives and relocating academicprograms to better align with current and future needs.

•

Maximizing Assets: Removal of costly, obsolete buildings, while also making the best use of valuable assets. Beyond these projects, the secondary objective of the plan was to consider potential new construction that met several driving factors:

•

Strategic Flexibility: Independent projects with minimal phasing implications that could respond to available fundingand/or specific needs.

•

Growth Opportunities: As-needed expansion to accommodate growth of individual and/or campus-wide needs.

•

Community Connection: Opportunities to serve campus andthe local community, while also enhancing campus entrancesand view corridors.

A recommended sequence of projects is provided on the following pages. However, it is understood that master plans must frequently flex to addresschanging needs or demands. As a result, the exact sequence of projects may need to change to meet these demands.

On the subsequent pages, greater detail about each project is provided.

LEGEND AND KEY 56

SCOPE

Hastings College has embarked on a master facilities plan that will align its facilities and physical campus with its educational, strategic, operational, student life, and athletic aspirations. The College hired Clark & Enersen and Tetrad Campus Insights as expert consultants to complete this work. Over the course of five months, the consultant team engaged with Hastings College leadership, faculty, staff, students, and other stakeholders to gather information, analyze opportunities, and create new ideas to enhance educational delivery, accommodate future growth, address deferred maintenance needs, optimize space utilization, and prioritize capital expenditures for the next 10 years.

GOALS & OBJECTIVES

The primary goals of the master plan, as identified by the Master Plan Steering Committee, are to enhance:

- **Community** – Provide interior and exterior space that engages with the college, city, and local community to create a sense of belonging, thereby bringing to life the “One Campus. One Community” slogan.
- **Experience** – Provide best-in-class learning, living, workplace, and technology to support pedagogical goals and the wellbeing of students, employees, and visitors.
- **Value** – Provide the programs, offerings, and amenities that align with the local region to compete on strong value propositions, using size as an asset.
- **Outcomes** – Provide an implementable roadmap that has cross-campus alignment in support of improved retention, success, satisfaction, finances, brand awareness, and long-term viability.

In order to achieve the goals of the master plan, five primary drivers were identified for the master plan. The drivers were the backdrop for the space and building planning concepts, and include:

Relational Connectedness Creating active, engaged, and connected citizens.**Visible Vibrant Community**Enhancing thought leadership, critical thinking, and creative energy.**Experience Marketing**Showcasing the experiences enabled by quality space, building, environs, and technology for improved marketing and recruitment. **Alignment & Defragmentation**Purposeful and productive location of academics, activities, and support.**HolisticGraduate**O ering programs, activities, and support for well-rounded graduates and a high return on investment.

STAKEHOLDERS

Throughout the course of the master planning process, great effort was made to ensure a comprehensive and inclusive level of engagement across a wide range of stakeholders and decision-makers. This was accomplished through numerous on-site meetings and walk-throughs, virtual meetings, presentations, questionnaires, and surveys.

Below is the list of individuals who contributed to this extensive effort. With gratitude, we acknowledge their time and commitment.

ASSUMPTIONS & LIMITATIONS

The purpose of this master plan is to inform high-level decisions for the types, timing, phasing, and costs of site and facilities projects for Hastings College through 2036. It should be viewed as a high-level roadmap, driving the general configuration of campus and the size and location of future building projects. While the plan should not be considered comprehensive programming or design, it presents data-driven concepts and phasing that can be used to serve the projected needs of the campus for the next 10 years.

The costs presented in this document are preliminary and are based on 2026 dollars. Depending on actual timing and sequencing of future projects, cost escalation and other factors will impact the magnitude of costs.

Off-campus properties, such as Sachtleben Observatory and Bryan College of Nursing space, are excluded from the master plan.

DATASETS

Multiple sources of data were used for this study. A listing of each dataset is provided below, along with a description of how the data was parsed and/or utilized.

- **Academic Degree Structure** – Spreadsheet used to align current and future CIP (Classification of Instructional Programs) codes. Used to organize academic departments and divisions, and the students, faculty, and courses within.
- **Registrar Data** – Spreadsheet listing all course data from 2015-2025. Used Fall 2025 data as the baseline for current course enrollment, classroom utilization, and academic department.
- **Enrollment Data** – Spreadsheet listing student enrollment from 2015-2025, de-duplicated to count primary majors only. Used Fall 2025 data as the baseline for student headcount by department and division. Full-time students were counted as 1.0 FTE, while part-time students were counted as 0.5 FTE.
- **Human Resources Data** – Spreadsheet listing anonymized employee information for Fall 2025. Used for assigning employees FTEs to departments/divisions for baseline input for program analysis and space needs analysis.
- **Tuition Data** – Spreadsheet listing tuition, fees, student-faculty ratios from 2015-2025. Used Fall 2025 data as a baseline input for program analysis.
- **Deferred Maintenance Data** – Spreadsheet managed by National Facilities Management, listing current and projected deferred maintenance needs. Some data was hidden, but remaining information was used as a baseline for operational considerations.
- **Space Use Data** – Existing space use data did not exist prior to the master plan. The consultant developed a campus-wide space use spreadsheet to catalog each room on campus, its approximate size, and its known uses. Used as the baseline for analyzing current space use and space metrics.
-

Hanover Research Data – Local, regional, and national data for academic programs, provided through partnership with Tetrad Campus Insights. Used for high-level assessment of current and future academic program metrics such degree completions, labor market statistics, and competitive analysis.

PREVIOUS REPORTS

Hastings College has invested in prior studies, assessments, and designs, all of which were shared to provide background information and context for the master planning process. These documents include:

- **Hastings College Existing Student Housing Assessment, Dec. 2023 (HBA, Morrissey Engineering, Turner)** – Assessment of the physical condition and infrastructure of Taylor Hall, Bronc Hall, Babcock Hall, and Bronco Village.
- **Hastings College Mechanical, HVAC, and Controls Assessment, Mar. 2025 (Optimized Systems)** – Assessment, deficiencies, and recommendations related to the mechanical, HVAC, and building control systems for the majority of campus buildings.
- **Hastings College Lighting Recommendation Report, Feb. 2024 (MR Global Productions)** – Exterior lighting recommendations for building and site lighting.
- **Hastings College McCormick & Fuhr Assessment, Jan. 2022 (BVH, Olsson)** – Assessment and recommendations for the building and building systems for McCormick Hall and Hayes M. Fuhr Hall of Music.
- **Mass Notification Risk Analysis and Recommendations Report, Aug. 2025 (Jensen Hughes)** – Risk analysis, evaluation, and recommendations for campus emergency communications.

•

Hastings College ADA Study, Jun. 2025 (CMBA) – Assessment and recommendations for ADA (Americans with Disabilities Act) compliance on the majority of campus buildings.

•

Hazelrigg Student Union | Design Development Narratives, Feb. 2025 (Morrissey Engineering) – Mechanical and electrical narratives for prior planned projects at HSU.

•

Perkins Library Renovation | Program Statement and Conceptual Design, Apr. 2023 (BVH) – Program and conceptual design information for prior planned project at Perkins Library.

3**PROCESS**

ASSESS-ANALY Z E -ACHI E VE 6 0

ASSESS-ANALYZE-ACHIEVE

The process for this master facilities plan was centered on the foundations of in-depth fact finding, creative ideation, and data-driven decision-making. In order to structure the plan over the course of several months, a three-step process was utilized: ASSESS - ANALYZE - ACHIEVE.

•

ASSESS: This step was focused on in-depth investigation of existing parameters unique to Hastings College, facilitated through open-ended discussion, on-site tours, and data aggregation.

•

ANALYZE: This step was comprised of refining, analyzing, and visualizing the information acquired during the ASSESS stage, followed by ideation of possible solutions across a wide variety of academic, financial, operational, and facility categories.

•

ACHIEVE: This step of the process focused on the development of specific recommendations, including garnering input and buy-in, and fine-tuning final recommendations for approval.

A description of the process steps across each category is shown on the adjacent table.

60

•Vision, mission, strategic plan, trends, and goals for: ▪Institution▪Departments and programs ▪Student life ▪Athletics ▪Community •Study/planning guiding principles,

priorities, and goals •Study/planning alignment with other institutional plans •Narrative development •Benchmarking analysis vs. national/regional peers •Framework for change •Prioritized plan for future •Implementation strategies •Capital planning strategies •Vision, mission, strategic plan, trends, and goals for: ▪Building floor plans and asbuilts ▪Prior FCI (Facility Condition Index) reports •Indepth facility tours of spaces and system equipment •Assessment of major infrastructure, equipment, and building features •Facility condition "grade" by category (e.g. architecture, engineering, code compliance, accessibility, etc.) •Facility and system upgrade recommendations, prioritization, and cost opinions•Historic data for: ▪Students and employees ▪Student credit hours ▪Oncampus vs. o.campus/ remote education •Trends and projections for: ▪Students and employees ▪Student credit hours ▪Oncampus vs. o.campus/ remote education ▪Benchmarking analysis•Projected students •Projected faculty and sta. •Projected student credit hours •Projected research funding •Tuition and remission rates •Salary data •Financial structures •Funding sources and uses•Financial impact of projections for: ▪Student and employees ▪Student credit hours ▪Oncampus vs. o.campus/ remote education ▪Benchmarking analysis •Financial modeling tools by program/department/ institution •Financial structure and incentive model recommendations •Cost e.iciency recommendations •Revenue enhancement strategies •Building floor plans •Space allocation inventories •Registrar data (schedules, capacities, occupancy) •Space standards, policies, utilization goals, and practices •Qualitative space use drivers (pedagogy objectives, AV needs, space functionality, user feedback, etc.)•Space allocation per person and/or student credit hour •Space utilization metrics •Benchmarking analysis of space standards, allocation metrics, and space needs•Space gap analysis (rightsizing), space projections, and building floor plans by program/ department/college/institution •Space optimization recommendations •Space use building floor plans and campus maps •Building floor plans •Campus maps •Parking locations and capacities •Pedestrian and vehicular pathways •Campus amenity locations •Prior master plans and facility plans •Campus design standards•Space need projections •Gross square footage need analysis •Building infrastructure capacities and limitations •Utility infrastructure capacities and limitations •Campus amenity capacities and limitations•Conceptual building massing, orientation, and siting •Conceptual building/site and departmental phasing •Conceptual site planning for parking, roads, pedestrian movement, site amenities, utilities •Cost opinions •Financial modeling and viability analysis •Prior deferred maintenance information •Assessment of major infrastructure, equipment, and building features •Supplemental projections of deferred maintenance needs •Campuswide and buildingspecific operational recommendations, prioritization, and cost opinions **INSTITUTIONALBUILDINGSPROGRAMS FINANCESPACEOPERATIONSMASTER PLANASSESSANALYZEACHIEVE**

4**PROGRAMS & FINANCES**

PROGRAM & FINANCE ANALYSIS 64

PROGRAM & F INANCE RECOMMENDAT IONS 6 6

PROGRAM & FINANCE ANALYSIS

A critical component of the planning process was the analysis of academic programs and finances. The process, aimed at accurately assessing and projecting student growth rates and determining the number of faculty required to deliver the academic experience, was based on a compounded annual growth rate (CAGR) assessment. This evaluation utilized data from Hanover Research, summarized at national, regional, and state levels. Specifically, the regional data encompasses the Plains Region, including Nebraska, Iowa, Kansas, Minnesota, Montana, North Dakota, and South Dakota, while the state-level data focused on Nebraska, Arizona, and Colorado.

This foundational research data established a fundamental basis for projecting student and faculty growth over the next decade. The results of this thorough assessment process were instrumental in driving the space requirements necessary to deliver the academic programs effectively.

The projected number of FTE students for the purposes of this plan are:

Net StudentHeadcountFTENTT FacultyTenure/TT FacultyAdmin/Sta_**Total FTENet RevenueTotal Expenses*Net Income*2026**860163505083715340499,680,65820,024,381*10,343,723*2027**858163505010,221,24821,139,380*10,918,132*2028**871163605110,687,39922,096,951*11,409,551*2029**886163605211,197,59723,141,881*11,994,284*2030**902163705311,741,80524,253,096*12,511,291*2031**922173705412,362,22025,517,347*13,155,127*2032**938173805512,954,05226,717,926*13,763,874*2033**957173905613,612,94028,051,846*14,438,905*2034**982184005814,387,61229,618,818*15,231,206*2035**1006184105915,181,42131,219,126*16,037,705*2036**

PROGRAM & FINANCE RECOMMENDATIONS

Program Recommendation #1: Class Size “Right-Sizing”

•

Establish efficient class sizes.

Program Recommendation #2: Faculty-to-Student “Right-Sizing”

•

Align the faculty count and distribution for the existing student headcount.

Program Recommendation #3: Review Ratio of Tenure Track vs. Non-Tenure Track Faculty

•

Review and adjust, where appropriate, the TT:NTT ratio.

Program Recommendation #4: Establish a General Education Program

•

The GenEd program serves as the academic foundation that supports student learning across disciplines and reinforces the institution’s core learning objectives. By refining GenEd requirements, Hastings College can preserve that purpose while maximizing academic efficiency and ensuring students gain the skills and knowledge needed for success. Revise the current GenEd program to maximize academic efficiencies and ensure student are obtaining future proof skills and knowledge.

Program Recommendation #5: Increase Philanthropic Goals

•

Consider options to increase philanthropic goals to fund growth (3-5%).

5**BUILDINGS**

BUILDING ASSESSMENT METHODOLOGY 70

BUILDING ASSESSMENTS BY BUILDING 74

BUILDING ASSESSMENT SUMMARY 286

BUILDING ASSESSMENT METHODOLOGY

A high-level assessment of the Hastings College building inventory was conducted to evaluate facility conditions across multiple parameters:

For each parameter, a scale of 1 to 5 was used to assess the current state. Ranking values are defined below:

•

1 = Very Poor Condition (in need of replacement)

•

2 = Poor Condition (nearing end of life)

•

3 = Adequate Condition (long-range upgrades should be considered)

•

4 = Good Condition (at/near contemporary standards)

•

5 = Excellent Condition (recently installed or replaced)

For each building, a variety of approaches were used to develop the ranking. Building tours were conducted in association with Hastings College staff, as well as National Facilities Management personnel. Additionally, some buildings had prior studies that were used to supplement the observations from the tours. It should be noted that the condition rankings are high-level and do not represent a detailed facility analysis.

On the following pages, a summary of building information has been provided, including:

•

Building Summary: Short paragraph describing the facility and its use.

•

Map: Location of building on campus.

•

Building Information: Brief summary of general building data.

•

Facilities Rankings: Building condition rankings.

•

Space Types: Net square footage per space category. (Refer to Section 06 – Space for more information regarding space categories.)

BUILDING SUMMARY:

Daugherty Student Engagement Center is a two-story brick building constructed in 1987. A major renovation took place in 2019 launching the student engagement initiative.

The facility is located toward the southern end of campus and is the starting point for campus tours.

BUILDING SUMMARY:

Perkins Library is a two-story plus partial basement brick building constructed in 1961. The rectangular plan Georgian Revival structure of reinforced concrete and steel and faced with brick and stone. Perkins Library was made possible through the generosity of Edwin and Kitty Perkins, the family responsible for the invention of Kool-Aid. The building is part of the Hastings College Historic District.

The facility is located on the southwest corner of campus.

BUILDING SUMMARY:

Kiewit is a three-story brick building constructed in 1969. The L-shaped building is made up of three separate, but interconnected, structures, the Art Center and Kiewit building are built with a much wider variety of materials and structure overall remains visually separated between former Carnegie Library, P.L. Johnson gymnasium, and Hemphill and Vierk's addition. The building is part of the Hastings College Historic District.

The facility is located on the south end of campus along E. 7th Street.

BUILDING SUMMARY:

Taylor Hall was built in two phases, phase one constructed in 1921 and used as a dining hall. Phase two completed in 1938 added levels two, three and four and was finished in the Georgian Revival style consisting of brick and steel framing. After completion in 1938 the entire building , excluding the stone tracery and lintels, was painted white. The paint was removed when the building was rehabilitated in the 1990s. The facility is currently used as a residence hall with 57 rooms. The building is part of the Hastings College Historic District.

The facility is located on the west side of campus.

BUILDING SUMMARY:

McCormick Hall was the first building constructed on campus in 1883. Named for the primary donor, Cyrus McCormick, McCormick Hall is a two-story plus Italianate brick structure with a three-story entrance tower. The total cost for the original construction was $14,703. The facility was the principal classroom building up into the mid 1950s and is still used for academics today. McCormick Hall was placed on the National Register of Historic Places in 1975 and is part of the Hastings College Historic District. The facility is located in the center of campus.

BUILDING SUMMARY:

Lloyd Wilson Field/Stadium was built in 2000 and seats over 3,000. The facility includes a press box, video scoreboard and field turf. The field and stadium are part of the larger Osborne Family Sports Complex.

The facility is located on the north side of campus along E. 12th Street.

BUILDING ASSESSMENT SUMMARY

BUILDING

RECOMMENDATIONS

BUILDING RECOMMENDATIONS

Building Recommendation #1: Building Floor Plans

•

Develop and routinely maintain electronic building floor plans.

Building Recommendation #2: Campus Design Guidelines

•

Develop campus design guidelines to ensure consistent quality of facilities.

Building Recommendation #3: On-Call Contracts

•

Select team of vetted on-call design and construction firms to quickly respond to current and future building needs.

SPACE ANALYSIS METHODOLOGY

The space analysis for Hastings College was completed using a standardized, metric-driven approach consistent

with higher-education planning practice. A full campus space inventory was established as the analytic baseline,

documenting every room by building, floor, function, area, and seat count. Spaces were classified using highereducation

space classification methodology, allowing consistent comparison across academic, administrative,

residential, student life, athletics, and support categories.

A full campus walkthrough confirmed current room use, resolved discrepancies in existing records, and validated

quantitative attributes. Final data—including assignable square footage, seat count, utilization characteristics, and

functional relationships—was consolidated into an integrated dataset to support comparative and demand-based

analysis. Each space type was evaluated against planning benchmarks and performance metrics. Academic spaces

were analyzed for seat density, area-per-station, configuration, and alignment with instructional norms; specialized

labs, studios, and rehearsal rooms were compared to discipline-specific requirements. Office and administrative

areas were assessed for workspace ratios, organizational adjacencies, and right-sizing relative to staffing levels.

Residential and student life spaces were reviewed for capacity, condition, and contemporary program expectations.

Non-assignable and circulation areas were examined to identify inefficiencies and opportunities for recoverable

space.

294

STUDENT ENROLLMENT

DEFINE CURRENT

AND HISTORIC

QUANTITIES OF USER

TYPES

FACULTY COUNT

ADMINISTRATIVE/STAFF

COUNT

STEP 1 in the projection process is to define the current

and historic quantity of relevant user types. The user types

analyzed should be individuals who will impact space

planning. This data may be used to determine a trend for

projected quantities of user types later in STEP 2 of the

process or may be used as a benchmark against which to

check targeted growth rates.

FACULTY 10 12 14 17

HISTORIC USER QUANTITY BY YEAR

2022

2023

2024

2025

FACULTY 17

USER QUANTITY

GROWTH

RATE

TARGET

30%

2026

2027

2028

2029

2030

STEP 2 in the projection process is to set growth targets for relevant user types. Targets may be percentage growth, numerical targets, or may simply continue to increase or decrease along the current trend line. Employee targets may be driven by financial models. This data will be used to identify the future quantity of users in STEP 3.

2

Example:

FACULTY 17 22 27 35 46

DETERMINE AND

WEIGHT PROJECTED

QUANTITIES OF

USERS

USER QUANTITY

GROWTH

RATE

TARGET

30%

2026

2027

2028

2029

2030

STEP 3 in the projection process is to determine and weight projected quantities of relevant user types. If a target growth rate is used, that rate will be applied annually, beginning with the current year quantity. If numerical quantity targets are used, the quantities will be already defined. Once these future user quantities are determined, a user factor may be applied to certain users to decrease or increase the impact they will have on space during STEP 5. Consider applying this for sporadic or parttime users.

3

Example:

HASTINGS COLLEGE | 2026 MASTER FACILITIES PLAN

295

CLASSROOMS STUDENTS

CORRELATE SPACE

TYPE GROWTH WITH

USER TYPE GROWTH

SPACE TYPE

CORRELATED

USER TYPE

Example:

STEP 4 in the projection process is to correlate space type growth with user type growth. Space types should be broadly categorized and be assigned a user type whose growth will most directly correlate with the growth of each space type. In some instances, more than one user type will affect the growth of the space type.

4

STEP 5 in the projection process is to assign unit space type quantities to user types. This will begin the translation of people growth into the quantification of future space needs. The unit quantity of space assigned to each user type(s) may be based on the ratio of the current net quantity of the space type to the current quantity of the user type(s) correlated in STEP 4. Alternatively, an industry

standard or targeted quantity may be used.

000 NON-ASSIGNABLE FACILITIES

Spaces not included in the categories above. This includes circulation, custodial closets, public restrooms, mechanical spaces, electrical spaces, telecommunications spaces, shafts, and similar spaces.

200 LABORATORY FACILITIES

Spaces with special-purpose equipment or configurations

used for student experimentation, observation, or practice. This includes both Class Laboratories (scheduled instruction) and Nonclass Laboratories (unscheduled).

300 OFFICE FACILITIES

Office facilities are individual, multiperson, or workstation spaces specifically assigned to academic, administrative, and service functions of a college or university.

500 SPECIAL USE FACILITIES

Spaces for activities with specific requirements, including military training, athletic facilities, media production, clinics (outside of health care facilities), animal shelters, and agricultural field activities.

700 SUPPORT FACILITIES

Centralized spaces that provide support services for an entire campus or large building/unit, such as central computer centers, maintenance shops, and central storage.

400 STUDY FACILITIES

Areas for individual or group study, such as libraries, study carrels, and general-purpose computer labs, not restricted to a specific discipline by equipment.

600 GENERAL USE FACILITIES

Spaces available to a broader population, such as auditoriums, dining halls, exhibition areas, lounges, merchandising, recreation, and meeting rooms.

800 HEALTH CARE FACILITIES

Spaces used for providing patient care (both human and

animal) located in student infirmaries, clinics, and medical

schools.

900 RESIDENTIAL FACILITIES

Housing for students, faculty, staff, and campus visitors,

including dormitories, apartments, and hotels.

100 CLASSROOM FACILITIES

Spaces used for formally scheduled instruction that do not

require special equipment or a specific configuration tied to

a single discipline.

SPACE DEMAND MODELING AND GROWTH ASSUMPTIONS

Space demand projections were developed by comparing the validated inventory to right-sized program

requirements and applying forecasted growth factors. All growth percentages were derived from the Hanover data

model, supplemented with input from Hastings College, to provide 10-year enrollment and staffing projections. For

100- and 200-level categories (Classrooms and Class Laboratories), campuswide 10-year enrollment growth—from

860 to 1,006 students—was applied. For 300- through 900-level categories, growth or decline was applied at the

department level based on program-specific trajectories at the department and/or campus level.

TEACHING SPACE (100-200 CATEGORIES)

Academic instructional spaces were evaluated using a standardized utilization and density framework. For each

division and department, current performance was calculated as:

• Current ASF/Student = Total scheduled classroom/class-lab square footage ÷ Total enrolled student contact

hours

• Ideal ASF/Station = Planning standard for the instructional type

• Ideal ASF/Student = Ideal ASF/Student adjusted to a 70% target utilization rate

The following metrics were used for each academic department, which were based on current and future

pedagogical parameters.

These factors were applied to actual inventory to determine current surpluses or deficits. A 17% 10-year enrollment

growth factor (2026–2036) from the Hanover data model was then applied to determine future instructional space

requirements.

Area Metrics | 300 - O_ice Space Type

DEPARTMENTAL AND SUPPORT SPACES (300–900 CATEGORIES)

For offices, studios, research, support, and all other non-instructional categories, future space needs were calculated

by comparing:

• Existing ASF, and

• 2026 Right-Sized ASF, defined as:

• 300-level (Offices): Current Faculty/Staff FTE × Industry Standard SF/Unit, adjusted for Hastings College's

pedagogy and current inventory

• 400–900 levels (studios, research, storage, student life, athletics, etc.): Current Faculty/Staff FTE × Hastings

College's current SF/Unit

The following metrics were used for office space (category 300), which were based on current and future workplace

parameters.

This right-sized baseline was then modified using each department's projected 10-year growth or decline percentage

from the Hanover data model. The resulting projected ASF requirements quantify future area needs by department

and category, identifying where space should expand, contract, or be strategically reallocated across campus.

SPACE INVETORY

SUMMARIES

SPACE INVENTORY SUMMARIES

(CAMPUS BY SPACE CATEGORY AND DIVISION)

A comprehensive space inventory provides a quantitative snapshot of how Hastings College utilizes its 627,057 Net Square Feet (NSF) of physical assets. The current distribution underscores the college's identity as a residential, performance-oriented institution. The largest categories of space are Residential (23.4%) and Unassignable (23.5%), which includes circulation and building support. This is followed by a significant allocation to Special Use (16.2%), a category dominated by athletics facilities, and Office (8.4%) space. Core instructional spaces, including Classrooms (5.4%) and Laboratories (5.9%), represent a smaller but critical portion of the overall footprint.

When categorized by administrative and academic divisions, the space allocation is similarly dominated by Housing and Athletics, which together account for over half of the programmed campus space. Among the academic divisions, Arts & Humanities and Math, Science & Business command the largest shares of assignable square footage. This high-level analysis provides the baseline for identifying potential surpluses, deficits, and opportunities for strategic reallocation in the chapters that follow.

SPACE INVENTORY SUMMARIES

(BUILDING BY DEPARTMENT)

While the previous section provided a campus-level overview, this section disaggregates the space inventory to the building level. The following charts provide a detailed breakdown of the departmental occupants within each major facility. This analysis is critical for understanding how programs are currently co-located, identifying buildings that serve a single purpose versus those that are multidisciplinary hubs, and revealing the primary departmental user for each physical asset. This building-by-department view provides the necessary context to evaluate existing programmatic adjacencies and inform future recommendations for departmental relocations or consolidations.

SPACE INVENTORY SUMMARIES

(BUILDING BY SPACE TYPE)

This section provides a detailed analysis of each building's interior composition, categorizing its assignable square footage by specific space use types such as classrooms, offices, and laboratories. This granular view is essential for understanding the primary function and character of each facility—for example, quantifying the degree to which a building is dedicated to instruction versus administrative support. By examining the proportional allocation of space within each building, we can identify facilities that may be programmatically imbalanced, such as a residence hall with a critical deficit of study space or an academic building dominated by inefficient circulation. This analysis forms the basis for identifying opportunities to right-size, renovate, or repurpose facilities to better align their physical space with their strategic mission.

CLASSROOM UTILIZATION

CLASSROOM UTILIZATION METHODOLOGY

The classroom utilization analysis for Hastings College was designed to evaluate how effectively the existing instructional spaces support current academic activity and to determine opportunities for right-sizing, scheduling efficiency, and future space planning. The process integrates room characteristics, course scheduling patterns, pedagogical requirements, and enrollment behavior into a unified analytical model.

1. Room Inventory and Space Characteristics

A detailed room inventory was compiled as the physical baseline for analysis. Each instructional space was documented with assignable area, room dimensions, seating capacity, furniture type, and use attributes (e.g., fixed tables, computer lab, single desks). Rooms were assigned capacity buckets and space-type categories to enable consistent comparison. This dataset established the functional limits of each classroom and the physical constraints affecting scheduling and pedagogical suitability.

2. Course and Scheduling Data Integration

All academic course sections were compiled with meeting days, times, weekly contact hours, enrollment counts, credit hours, and pedagogical designations. Each section was cross-referenced with its assigned instructional space, allowing calculation of demand metrics such as:

- Enrollment vs. room capacity
- Seat fill percentage and remaining seats
- Course distribution by class size range
- Time-of-day and day-of-week demand loads

This dataset provided the basis for determining both scheduling efficiency and the appropriateness of the physical room assigned.

3. Utilization Analysis

Utilization was analyzed along two primary dimensions:

-

Time Utilization – percentage of standard scheduling hours during which each room is in use

•

Seat Utilization – percentage of available seats filled by enrolled students in each scheduled section

Heat maps were generated for both day-of-week and time-of-day to identify peak periods, underloaded hours, and structural patterns in academic demand.

4. Capacity Alignment and Room-Size Matching

Course enrollment was compared to room capacity to quantify oversizing, undersizing, and ideal matches. Patterns were assessed within each enrollment band, identifying:

•

Courses consistently placed in rooms too large

•

Courses assigned to rooms below needed capacity

•

Opportunities to rebalance scheduling to improve seat efficiency

•

Gaps in specific room sizes (e.g., shortage of <25-seat classrooms or mid-size flexible rooms)

This analysis supported recommendations for room right-sizing, furniture adjustments, or scheduling policy refinement.

5. Implications for Space Needs and Master Planning

Utilization results were synthesized to determine the functional adequacy of the existing classroom portfolio. Findings inform:

•

Target room counts by capacity range

•

Requirements for flexible, reconfigurable teaching spaces

•

Rooms appropriate for repurposing based on persistent underutilization

•

Priority spaces where modernization or reconfiguration would yield measurable efficiency gains

The methodology establishes a consistent, evidence-based framework for aligning Hastings College's instructional space supply with current and future academic demand, ensuring that classroom resources support effective teaching, right-sized growth, and long-term campus planning.

CLASSROOM UTILIZATION SUMMARIES (CAMPUS)

Classroom utilization data provides key insights into how scheduling patterns align with institutional priorities. The data for Hastings College clearly reflects its commitment to a block scheduling model, which is intentionally designed to support the college's high percentage of student-athletes. Across both academic sessions, classroom use is heavily concentrated in the morning, peaking at 84% utilization at 10:00 AM and remaining robust through the early afternoon. The subsequent, deliberate drop-off in scheduled academic activity frees up the afternoons, allowing student-athletes the necessary time for practice, training, and travel without creating academic conflicts. While this model effectively serves the student-athlete population, the significant underutilization on Wednesdays presents a strategic opportunity to accommodate future enrollment growth or new programs without disrupting the core block schedule.

CLASSROOM UTILIZATION SUMMARIES

(ACADEMIC DIVISION)

While the campus-wide summary reveals overall scheduling patterns, a more granular analysis by academic division is necessary to understand the unique demands of each program. The following table disaggregates seat utilization by division, offering insights into which programs are most efficiently using their assigned instructional spaces. This divisional view helps identify specific areas of high demand, such as Math, Science, & Business (62% seat utilization), versus those with potential capacity for growth or repurposing, like Arts & Humanities (50% seat utilization). This data is critical for informing recommendations related to right-sizing the classroom inventory, identifying opportunities for interdivisional space sharing, and ensuring that future space investments are targeted to the divisions with the most demonstrated need.

2025 Classroom Utilization by Department

SPACE ORGANIZATION MODELING

Hastings College has identified hybrid-flexible (HyFlex) instruction as a preferred delivery model for general

classrooms, supporting scheduling flexibility, instructional resilience, and evolving pedagogical needs. As

demonstrated in the utilization analysis, HyFlex implementation effectively reduces usable capacity in many

existing rooms, shifting demand away from smaller classrooms and increasing the importance of mid-sized spaces.

The 31–40 seat range emerges as the most efficient and adaptable classroom capacity, balancing enrollment

demand with the spatial and technological requirements of HyFlex instruction. Strategically increasing the average

classroom size within this range improves overall utilization efficiency and directly benefits the planning cost model

by reducing the total number of classrooms required to support projected instructional demand. Prioritizing the

expansion of 31–40 seat classrooms through renovation, reconfiguration, or targeted new construction will better

align the physical learning environment with Hastings College's academic goals while supporting long-term capital

efficiency.

Planning Implication / Design Guideline

Planning Implication: Future classroom investments should prioritize increasing the proportion of 31–40 seat

classrooms to support HyFlex instruction, improve utilization efficiency, and reduce long-term space and capital

costs.

TOTAL SPACE

SPACE

RECOMMENDATIONS

SPACE RECOMMENDATIONS

Space Recommendation #1: Space Inventory

•

Develop and routinely maintain a space inventory to track room allocation by use, department, and division.

Space Recommendation #2: Classroom Sizing

•

Modify classroom furnishings, technology, and layout to enable active learning.

•

Increase inventory of classrooms with capacities of 31-40 to satisfy projected teaching needs..

Space Recommendation #3: Classroom Utilization

•

Align course scheduling and classroom assignments to achieve average classroom utilization of 70% across campus.

7**OPERATIONS**

OPERATIONS OVERVIEW 358

OPERATIONS RECOMMENDATIONS 360

OPERATIONS OVERVIEW

The existing operations of Hastings College were discussed, observed, and analyzed at a high level to understand existing pain points, deferred maintenance challenges, and opportunities for improvement.

The consultant team received data from Hastings College's maintenance provider, National Facilities Management, which included deferred maintenance summaries for each building across several parameters.

Using that information, and supplementing it with their own analysis and projections, an evaluation was made to project 10-year operational costs for each building. This information provided a data point for master plan decisions related to demolition, renovation, and/or new construction.

OPERATIONS RECOMMENDATIONS

Operations Recommendation #1: Deferred Maintenance Budget

•

Increase deferred maintenance budget to systematically address deficiencies across campus.

Operations Recommendation #2: Building Metering

•

Install water and power metering in individual buildings to track current and future usage.

Operations Recommendation #3: Building Management Systems

•

Install common building management system (BMS) to enhance building operations, trending, troubleshooting, and energy use.

8**CAMPUS MASTER PLAN**

PLANNING PRINCIPLES 364

CAMPUS CONNECT IVIT Y, MOBILIT Y, & ACCESSIBILIT Y 366

CAMPUS CHARACTER 368

LEARNING ENVIRONMENTS 370

STUDENT LIFE, HOUSING, & CAMPUS E XPERIENCE 372

MASTER PLAN ANALYSIS 374

MASTER PLAN RECOMMENDATIONS , PHASING, & COSTS 376

PLANNING PRINCIPLES

A comprehensive campus master plan provides the long-term physical framework that supports an institution's academic mission, enrollment strategy, financial stewardship, and community engagement. Effective higher education master planning integrates land use, facilities, infrastructure, mobility, sustainability, and student life into a cohesive, flexible vision that can adapt to evolving pedagogical, technological, and demographic demands.

The master plan must directly support the college's mission, vision, and academic strategic goals. Physical development priorities should reinforce:

•

Academic program growth and interdisciplinary collaboration

•

Athletic program growth

•

Student success, recruitment, and retention

•

Community and industry partnerships

•

Identification of physical assets and liabilities

Facilities and land use decisions are most successful when they are tightly aligned with the institution's long-range academic and financial strategies.

CAMPUS CONNECTIVITY, MOBILITY, AND ACCESSIBILITY

Movement systems must safely and efficiently support pedestrians, cyclists, personal vehicles, and service vehicles. Master planning emphasizes:

•

Pedestrian-first campus environments

•

Universal accessibility in accordance with ADA standards

•

Integrated transit and shared mobility systems

•

Managed parking supply located to protect the academic core

Well-designed mobility networks enhance safety, reduce congestion, and strengthen the overall campus experience. The Master Plan should create desirable pedestrian paths from key campus axis, north to south and east to west. High volume parking should be located near large event or public arrival points. There should be a reduction of parking near academic buildings to encourage walking, locating parking at the perimeter of campus.

EXISTING PEDESTRIAN CIRCULATION

EXISTING VEHICLE CIRCULATION

CAMPUS CHARACTER

Campus Character, Identity, and Placemaking

A cohesive physical identity reinforces institutional brand and sense of place. Planning addresses:

•

Architectural guidelines and campus design standards

•

Preservation of historic resources

•

Hierarchies of open spaces and quadrangles

•

Integration of public art and landscape features

•

Placemaking and point-of-arrival sequencing

A strong campus identity enhances visibility, community connection, and provides a strong recruitment experience. The existing arboretum and connection to the city park should be expanded as ideal landscape ecology to be respected by future development. Future work should identify sustainability and wellness goals to align campus development with energy efficiency, carbon reduction strategies, stormwater management and other resilient measures. Physical assets that appear dilapidated or in disrepair should be corrected through investment in rehabilitation or demolished.

Significant Buildings

The full building assessment identified two buildings with strong historical and emotional value to Hastings College, which are McCormick Hall & Calvin H. French Memorial Chapel.

KEY NATURAL ASSETS & MAJOR QUADS

SIGNIFICANT BUILDINGS & MONUMENTS

LEARNING ENVIRONMENTS

Space planning must reflect changing models of teaching, learning, and research. Key principles include:

•

Flexible, technology-enabled learning spaces

•

Shared research infrastructure to promote collaboration

•

Adaptable learning laboratories and innovation hubs

•

Balanced space utilization and right-sizing of facilities

Master plans prioritize versatile environments that can evolve with academic delivery models and predicted program growth patterns.

EXISTING LEARNING ENVIRONMENTS

STUDENT LIFE, HOUSING, AND CAMPUS EXPERIENCE

A successful campus supports the holistic student experience beyond the classroom. Planning principles address:

•

Proximity of housing to academic and student life destinations

•

Vibrant, mixed-use student districts

•

Recreational, wellness, and cultural facilities

•

Safe, inclusive, and engaging public spaces

These elements directly impact student recruitment, retention, and overall institutional competitiveness.

MASTER PLAN ANALYSIS

Land Use Organization and Campus Structure

Clear and logical land use zoning is fundamental to campus effectiveness and identity. Planning principles include:

- Defining and reinforcing primary academic cores
- Strategically locating student life, athletics, housing, and educational districts
- Creating well-defined campus edges and gateways
- Preserving future development sites through phased growth strategies

A legible campus structure promotes intuitive wayfinding, efficient operations, and long-term adaptability. An organizational concept named Cultural Connectedness was developed to identify cultural nodes across campus. Using this concept, and overlaying numerous objectives identified by Hastings College, a long-range Master Plan was established. This long range plan incorporates the following:

- Cleaning up the campus edge, providing clear points of arrival for the public
- Establishing adequate parking at the campus edges demarcated with welcome points

•

Identifying pedestrian pathways and lighting for campus connectedness and security

•

Co-locating residential facilities

•

Removing buildings that are underutilized and represent a liability

•

Developing new buildings to support program growth

ORGANIZATIONAL CONCEPT: CULTURAL CONNECTEDNESS

FULL MASTER PLAN (ALL PHASES)

MASTER PLAN RECOMMENDATIONS,

PHASING, AND COSTS

A successful master plan is both visionary and implementable. It includes:

• Phased development strategies

• Capital improvement prioritization

• Funding and financing alignment

• Measurable implementation benchmarks

Phasing allows institutions to respond to changing enrollment, funding availability, and academic priorities while

maintaining momentum.

The total inventory of space at Hastings College meets the projected 10-year needs of the campus, which is a luxury

many institutions do not have. However, opportunities for reorganization and renovation of existing buildings and

space were identified in order to meet broader goals of Hastings College. Through that lends, a series of short-term

and longer-term projects has been developed. The primary objective was renovating and reorganizing existing

campus assets. The driving factors were:

• **Optimizing Efficiency:** Aggregation of campus functions.

• **Improving Academic Space:** Improvement of classrooms to match pedagogical objectives and relocating

academicprograms to better align with current and future needs.

• **Maximizing Assets:** Removal of costly, obsolete buildings, while also making the best use of valuable assets.

Beyond these projects, the secondary objective of the plan was to consider potential new construction that

met several driving factors:

• **Strategic Flexibility:** Independent projects with minimal phasing implications that could respond to available

fundingand/or specific needs.

• **Growth Opportunities:** As-needed expansion to accommodate growth of individual and/or campus-wide

needs.

• **Community Connection:** Opportunities to serve campus andthe local community, while also enhancing

campus entrancesand view corridors.

A recommended sequence of projects is provided on the following pages. However, it is understood that master

plans must frequently flex to addresschanging needs or demands. As a result, the exact sequence of projects may

need to change to meet these demands.

On the subsequent pages, greater detail about each project is provided.

Project Cost (2026):

• $840,000

Escalated Project Cost:

• $840,000

AFTER

387

TAYLOR HALL - DEMOLITION & SITE UPGRADES

Timeline (Completion: August 2027)

• Design: 4 months

• Demolition ($900k): 2 months

• Site Upgrades ($250k): 4 months

BEFORE

388

Project Cost (2026):

• $1,150,000

Escalated Project Cost:

• $1,207,500

AFTER

389

ALTMAN HALL - DEMOLITION & SITE UPGRADES

Timeline (Completion: August 2027)

• Design: 4 months

• Demolition ($700k): 2 months

• Site Upgrades/Parking Lot ($750k): 4 months

BEFORE

390

Project Cost (2026):

• $1,450,000

Escalated Project Cost:

• $1,522,500

AFTER

391

CAMPUS SAFETY BUILDING - DEMOLITION

Timeline (Completion: August 2028)

• Design: 4 months

• Demolition ($100k): 2 months

• Site Upgrades ($250k): 4 months

BEFORE

392

Project Cost (2026):

• $350,000

Escalated Project Cost:

• $386,000

AFTER

393

905 N ELM AVE. & 611 E 9TH ST. - DEMOLITION

Timeline (Completion: August 2028)

• Design: 4 months

• Demolition ($175k): 2 months

• Site Upgrades ($250k): 4 months

BEFORE

394

Project Cost (2026):

• $425,000

Escalated Project Cost:

• $469,000

AFTER

INTERIOR PARKING LOT - DEMOLITION & SITE UPGRADES

Timeline (Completion: August 2028)

• Design: 4 months

• Demolition ($200k): 2 months

• Site Upgrades and Façade Enhancements ($500K): 4 months

BEFORE

396

Project Cost (2026):

• $700,000

Escalated Project Cost:

• $772,000

AFTER

397

MCCORMICK HALL - FULL RENOVATION (11,500 SF)

Timeline (Completion: August 2028)

• Design: 9 months

• Move Out: 2 months

• Construction: 11 months

• Move in: 2 months

BEFORE

398

Project Cost (2026):

• $5,200,000

Escalated Project Cost:

• $5,733,000

AFTER

399

Program & Use Revisions

• Remodel to office use only

• Move more faculty offices in

• Remodel half of 1st Floor to be an interdisciplinary collaboration hub

• Remodel half of 2nd Floor to be an interdisciplinary collaboration hub

Remodel Summary
